

CELIBER

INDUSTRY

Industrial vehicles / trains / aeronautics

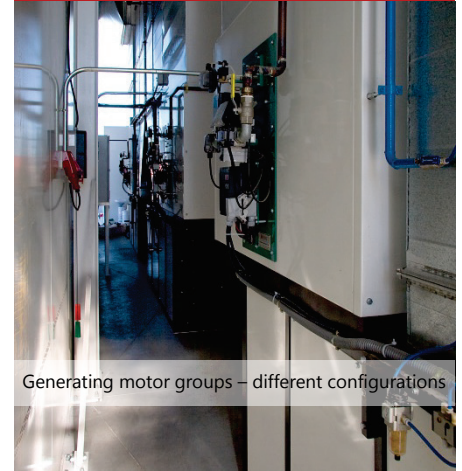

All our panels contains high resistance rock wool (145 Kg./m³), and have fireproof capacity (no flame possibility), they are manufactured in only one piece (no joints) and they are reinforced to adapt to any size possible.

Designed following European Normative UNE EN 13355 and adapted to the requirements of the client.

Lateral service doors are part of the panel.

Reaction turbines (direct transmission between motor and turbine axis), for less maintenance and good capacity.
Diesel, Gas or Direct combustion Gas Burners

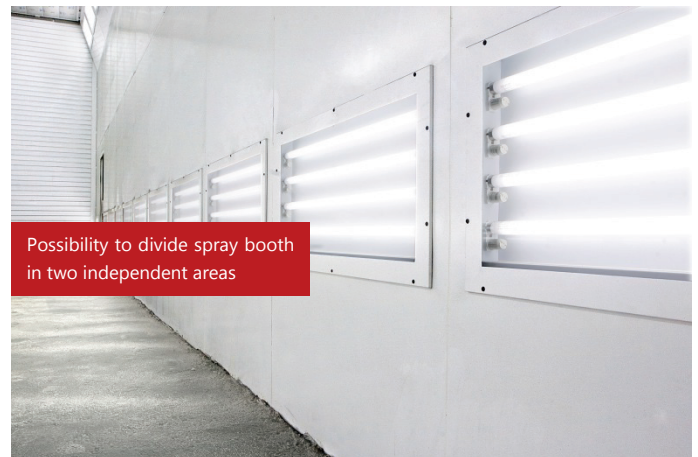

Generating motor groups – different configurations

- With the inclination angle already given when manufacturing and the correct placing of the lights we supply optimum illumination.
- Impulsion motor groups (1 motor per group) with extraction by natural airflow.
- Impulsion + extraction (2 motors per group) with motorized extraction and automatic pressure control by INVERTER frequency variator.

Interior lifting platforms.

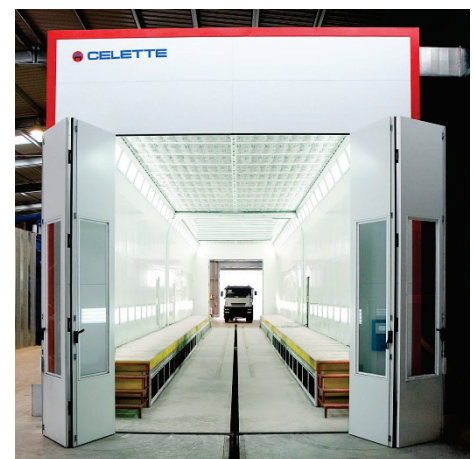

Possibility to divide spray booth in two independent areas

- Touch screen control panel. Programmable: automatic control of all parameters with several programs for different kind of works.

Possibility to adapt to any dimensions of spray booth

- Easy to use: simplification and ergonomics.
